

## Child-care finder

### 1. The general idea

- This app will help parents and carers find babysitters, nannys, and carers in minutes.
- Everyone in the childcare business will input their age, qualification and county. The parent/carer will put in location, (Babysitter) time needed and for how long, and how many kids. (Nanny/carer) how many kids, the days of the week needed and location. It will then give them a selection of people available and you will choose. It will then alert the person they have chosen.
- It is aimed at parents or guardians (people over the age of 21)
- USP: 'A range of child-minders, at the touch of a fingertip'
- It will have a schedule for each child-minder so you can book them straight away and know if they are free. It will only say if they are available or not. Not who they are looking after.
- It will be on both Android and iOS
- The app will have advertisements. People who are sitters/nannies will pay 3 pounds a month.
- It will need to have access to GPS so it can find the nearest child-minder.
